

Materials:

Free Standing Lace Heart Design(s)
Ultra Solvy - Water Soluble Stabilizer
Thread & Bobbin Thread (same color)
Sharp 11 Needle
Spray Starch
Wax Paper
Paper Towels
Bowl & Water

Step 1:

Cut a piece of Solvy that is a little larger than your hoop.

Step 2:

Hoop Solvy, making sure that it is hooped very tightly.

Step 3:

Place hoop onto your machine and embroider the lace design of your choice.

Step 4:

Once the design is done embroidering. Remove from the machine and trim the excess solvy around the outside of the design.

Step 5:

Then add hot/warm water to your container. The water should be high enough in the bowl so that the entire lace heart will be submerged.

Step 6:

Place your lace design inside the container. Let the design soak for about 10 – 15 minutes. This will remove the solvy from the design.

Step 7:

Remove the design from the water and blot dry with the paper towel.

Step 8:

Now place the design on wax paper and spray with starch, flip the design over and spray with starch again. You do not need a lot of starch unless you would like it to be very stiff.

Step 9:

Place another piece of wax paper on top of the design. To make sure the design dries flat add a heavy book(s) on top and leave it there for 12 to 24 hours.

Step 10:

Iron the lace heart of desired, making sure to place a thin cloth over the lace so it does not get scorched by the iron.

Now your lace heart is completed and ready to decorate your home.

Thank you for your purchase.
